

CARESYNC HOSPITAL

Emergency Department Standard Operating Procedure (SOP)

Document Type: Standard Operating Procedure (SOP)

Department: Emergency Medicine Department

Version: 1.0

Effective Date: January 1, 2026

Review Frequency: Annual

Page 1: Introduction and Purpose

1.1 Purpose

The purpose of this SOP is to establish standardized procedures for the assessment, treatment, stabilization, admission, transfer, and discharge of patients presenting to the Emergency Department (ED).

1.2 Scope

This SOP applies to:

- Emergency Physicians
- Emergency Nurses
- Registration Staff
- Laboratory Personnel
- Radiology Personnel
- Security Staff
- Ambulance Services
- Hospital Administration

1.3 Objectives

- Provide timely emergency care.
 - Improve patient safety.
 - Reduce treatment delays.
 - Standardize emergency workflows.
 - Ensure regulatory compliance.
-

Page 2: Emergency Department Organization

2.1 Emergency Department Areas

The Emergency Department consists of:

- Triage Area
- Registration Desk
- Resuscitation Room
- Observation Unit
- Procedure Room
- Trauma Bay
- Isolation Room

2.2 Staffing Structure

The department shall maintain:

- Emergency Physicians
- Nursing Staff
- Emergency Technicians
- Support Staff
- Security Personnel

2.3 Operational Hours

The Emergency Department operates:

24 Hours per Day
7 Days per Week
365 Days per Year

2.4 Emergency Contact Numbers

Emergency Hotline: 108

Hospital Emergency Desk: +91-40-5555-1234

Page 3: Patient Arrival and Registration

3.1 Methods of Arrival

Patients may arrive through:

- Walk-In
- Ambulance
- Referral Hospital
- Police Escort
- Disaster Response Units

3.2 Registration Procedure

The registration team shall:

1. Verify patient identity.
2. Create Emergency Visit Number.
3. Collect emergency contact information.
4. Notify emergency physician.

3.3 Unidentified Patients

If patient identity is unknown:

- Temporary ID shall be generated.
- Identification efforts shall continue.
- Medical treatment shall not be delayed.

3.4 Registration Exceptions

In life-threatening emergencies, treatment begins immediately before administrative processes are completed.

Page 4: Triage Procedures

4.1 Purpose of Triage

Triage prioritizes patients based on medical urgency.

4.2 Triage Categories

Level 1 – Resuscitation

Immediate life-threatening condition.

Examples:

- Cardiac Arrest
- Respiratory Arrest
- Severe Trauma

Level 2 – Emergent

High-risk condition requiring immediate evaluation.

Examples:

- Chest Pain
- Stroke Symptoms
- Severe Breathing Difficulty

Level 3 – Urgent

Condition requiring treatment within a short period.

Examples:

- Moderate Injuries
- High Fever
- Severe Pain

Level 4 – Less Urgent

Minor injuries or illnesses.

Level 5 – Non-Urgent

Routine medical complaints.

Page 5: Initial Assessment and Stabilization

5.1 Primary Assessment

Emergency staff shall assess:

- Airway
- Breathing
- Circulation
- Disability
- Exposure

(ABCDE Assessment)

5.2 Vital Signs Monitoring

Record:

- Blood Pressure
- Heart Rate
- Respiratory Rate
- Temperature
- Oxygen Saturation

5.3 Immediate Interventions

As clinically indicated:

- Oxygen Administration
- IV Access
- Fluid Resuscitation
- Cardiac Monitoring
- Emergency Medications

5.4 Documentation

All interventions shall be documented in real time.

Page 6: Emergency Clinical Management

6.1 Cardiac Emergencies

Examples:

- Heart Attack
- Cardiac Arrest
- Arrhythmias

Actions:

- ECG within 10 minutes
- Cardiology consultation
- Advanced Cardiac Life Support (ACLS)

6.2 Stroke Management

Actions:

- Neurological assessment
- CT Scan
- Stroke Team Activation

6.3 Trauma Management

Actions:

- Trauma Team Activation
- Cervical Spine Protection
- Hemorrhage Control

6.4 Pediatric Emergencies

Specialized protocols shall be followed for pediatric patients.

Page 7: Diagnostic and Treatment Services

7.1 Laboratory Services

Available emergency tests:

- CBC

- Blood Glucose
- Cardiac Enzymes
- Coagulation Profile
- Electrolytes

7.2 Radiology Services

Emergency imaging includes:

- X-Ray
- CT Scan
- Ultrasound
- MRI (when indicated)

7.3 Medication Administration

Emergency medications shall be:

- Physician Authorized
- Properly Documented
- Safely Administered

7.4 Blood Bank Services

Blood products shall be available for emergency transfusions.

Page 8: Admission, Transfer, and Discharge

8.1 Admission Criteria

Patients shall be admitted when:

- Ongoing monitoring is required.
- Further treatment is necessary.
- Surgery is planned.
- ICU care is indicated.

8.2 Transfer Procedures

Transfers require:

- Physician Approval
- Receiving Unit Acceptance
- Clinical Handover Documentation

8.3 Discharge Criteria

Patients may be discharged when:

- Clinically stable.
- Treatment completed.
- Follow-up arranged.

8.4 Discharge Instructions

Patients shall receive:

- Medication Guidance
 - Warning Signs Information
 - Follow-up Appointment Details
-

Page 9: Disaster Management and Emergency Preparedness

9.1 Disaster Types

Examples:

- Mass Casualty Incidents
- Natural Disasters
- Fire Emergencies
- Chemical Exposure Events
- Infectious Disease Outbreaks

9.2 Disaster Activation

The Hospital Incident Command System (HICS) shall be activated.

9.3 Resource Management

The hospital shall maintain:

- Emergency Equipment
- Backup Power
- Additional Medical Supplies

9.4 Staff Responsibilities During Disasters

All personnel shall report according to disaster response plans.

Page 10: Quality Assurance and Safety

10.1 Emergency Department Quality Indicators

The hospital shall monitor:

- Door-to-Doctor Time
- Door-to-ECG Time
- Patient Satisfaction
- Mortality Rates
- Admission Rates

10.2 Patient Safety Measures

The department shall ensure:

- Accurate Patient Identification
- Medication Safety
- Infection Prevention
- Fall Prevention

10.3 Incident Reporting

Staff shall report:

- Adverse Events
- Medication Errors
- Equipment Failures
- Near Misses

10.4 SOP Review

This SOP shall be reviewed annually and revised when necessary.

Emergency Department Equipment Checklist

Essential Equipment:

- Defibrillator
- Cardiac Monitor
- Ventilator
- Suction Machine
- Infusion Pumps
- Emergency Crash Cart
- Oxygen Supply System
